Connie
Presto Resourcing

Dear Connie,

I was excited to find the position of Intermediate Software Engineer and am delighted to submit my application for the role.

For the past two years, I have worked as a software engineer at MODLR New Zealand, where I designed and developed a custom CRM system using Node.js to enhance customer relationship management for financial transactions. I collaborated closely with clients to develop, review, and refine system designs tailored to their specific business needs. This included writing JavaScript code to integrate APIs from various accounting platforms into the CRM system, managing customer financial data through seamless web applications. Additionally, I implemented unit tests to ensure that code changes did not introduce regressions or break existing functionality.

I earned a B.Sc. in Computer Science from UC Irvine in California, where I excelled in machine learning, AI, algorithms, and data structures. I led a team in designing a university enrollment system using Python and MySQL and gained extensive experience in teamwork and technical design through various machine learning and AI projects.

Thank you in advance for considering my application. I am very interested to learn more about this opportunity and I look forward to hearing back from you soon.

Sincerely,
Daniel Murphy
